

Juno Pediatric Brace

*The world's first
pediatric knee braces
able to reproduce the
natural movement of
the knee, including
axial-rotation*

FEATURES & BENEFITS

The Juno pediatric knee brace is **custom 3D-printed specifically for active children or for children with Osteochondritic Dissecans (JOCD) requiring unloading**. It's entirely mass customized based on height, age, and weight in order to tailor the length and thickness of the frame to precisely accommodate a child's leg. The hinges may be scaled down to align perfectly with a child's knee and biomechanics for an accurate fit. Constructed with optimized design, the Juno pediatric knee brace offers lightweight yet sturdy support.

AGES <10 YO

BRACE LENGTH 11"

AGES 10-14 YO

BRACE LENGTH 12"

AGES 14+ YO

BRACE LENGTH 13"
